

# COMBUSTIBLE DUST

## Explosion Protection Solutions

**MICROAIR**

**Clean. Easy. RED.**

**Why Risk a Dust  
Explosion?**

### NFPA / OSHA COMPLIANCE COMPONENTS

- MECHANICAL BACKDRAFT DAMPER
- FLAMEQUENCH
- BARREL LID/HARD PIPE
- CHEMICAL ISOLATION
- LEDGELESS HOPPER
- EXPLOSION VENT
- FAST-ACTING EIV VALVE

**COUNT ON MICRO AIR FOR YOUR OSHA/NFPA  
COMBUSTIBLE DUST COMPLIANCE PACKAGE**

# NFPA/OSHA COMBUSTIBLE DUST COMPLIANCE PACKAGE

## OUTDOOR INSTALL—NO RETURN AIR

### SINGLE MODULE COLLECTORS

**A**

COMPONENTS REQUIRED FOR NFPA / OSHA COMBUSTIBLE DUST COMPLIANCE

- 1 EXPLOSION VENT KIT
- 2 INLET ISOLATION: MECHANICAL BACKDRAFT DAMPER, or EIV FAST-ACTING VALVE, or CHEMICAL ISOLATION
- 4 BARREL LID / HARD PIPE and LEDGELESS HOPPER (STD. ON NEW MICRO AIR RP UNITS)

# NFPA/OSHA COMBUSTIBLE DUST COMPLIANCE PACKAGE

## OUTDOOR INSTALL—WITH RETURN AIR

### SINGLE MODULE COLLECTORS

**B**

REQUIRED FOR NFPA / OSHA COMBUSTIBLE DUST COMPLIANCE

- ① EXPLOSION VENT KIT\*
- ② INLET ISOLATION: MECHANICAL BACKDRAFT DAMPER, OR EIV FAST-ACTING VALVE, OR CHEMICAL ISOLATION
- ③ EXHAUST ISOLATION: EIV FAST-ACTING VALVE, or CHEMICAL ISOLATION
- ④ BARREL LID / HARD PIPE and LEDGELESS HOPPER (STD. ON NEW MICRO AIR RP UNITS)

ADDITIONAL OPTIONS

- ⑤ FLAME DIVERTER or FLAMELESS VENT (FLAMEQUENCH) \*\*
- ⑥ ROTARY AIRLOCK

\*\* FLAMEQUENCH Flameless Vent is for Non-Metal Applications

# NFPA/OSHA COMBUSTIBLE DUST COMPLIANCE PACKAGE

**C**

## INDOOR INSTALL SINGLE MODULE COLLECTORS

### REQUIRED FOR NFPA / OSHA COMBUSTIBLE DUST COMPLIANCE

- ① EXPLOSION VENT KIT\*
- ② INLET ISOLATION: MECHANICAL BACKDRAFT DAMPER, OR EIV FAST-ACTING VALVE, OR CHEMICAL ISOLATION
- ④ BARREL LID / HARD PIPE AND LEDGELESS HOPPER (STD. ON NEW MICRO AIR RP UNITS)

### ADDITIONAL OPTIONS

- ⑤ FLAMELESS VENT (FLAMEQUENCH) \*\*
- ⑥ ROTARY AIRLOCK

\*Must be ducted to exterior wall (max. 3' duct) or used in conjunction with flameless vent

\*\* Flameless Vent is for Non-Metal Applications

### DESIGN CRITERIA FOR OSHA/NFPA COMBUSTIBLE DUST COMPLIANCE

- (1) Determine Kst Values of particulate being collected.
- (2) If Kst values require Explosion Protection, design system per scenarios A, B, or C

### BOLT-TOGETHER MODULE COLLECTORS—REMOTE MOUNT FAN

#### REQUIRED FOR NFPA / OSHA COMBUSTIBLE DUST COMPLIANCE

- ① EXPLOSION VENT KIT\*
- ② INLET ISOLATION: MECHANICAL BACKDRAFT DAMPER, OR EIV FAST-ACTING VALVE, OR CHEMICAL ISOLATION
- ③ EXHAUST ISOLATION: EIV FAST-ACTING VALVE, or CHEMICAL ISOLATION
- ④ BARREL LID / HARD PIPE AND LEDGELESS HOPPER (STD. ON NEW MICRO AIR RP UNITS)

#### ADDITIONAL OPTIONS

- ⑤ FLAMELESS VENT (FLAMEQUENCH) \*\*
- ⑥ ROTARY AIRLOCK

\*Must be ducted to exterior wall (max. 3' duct) or used in conjunction with flameless vent

\*\* Flameless Vent is for Non-Metal Applications

DESIGN CRITERIA SAME AS SINGLE MODULE UNITS ...SEE PAGE 3 FOR DEFINITION

#### OSHA COMBUSTIBLE DUST EMPHASIS PROGRAM GUIDANCE

##### What are the components of a dust explosion?

1. Ignition Source
2. Fuel (Combustible Dust)
3. Oxygen
4. Dust dispersion at or greater than dust's MEC
5. Confinement of dust cloud in equipment or building

Simply stated, a dust explosion occurs when an ignition source touches a dust cloud with a concentration at or greater than the dust's MEC (minimum explosible concentration). A dust cloud with this concentration can result when a layer of dust thicker than 1/32 inch on equipment, piping, overhead conduit or similar components is pushed into the air by some event, such as the pressure wave from a relief device's operation. When an ignition source (spark or flame) touches the cloud, the dust can explode with devastating impact.

**NFPA 654 states that particulate processing systems shall prevent fire or explosion from propagating from one process to another.**

##### How do you mitigate your dust collection system's explosion risk?

- (1) Collectors shall be equipped with **explosion vent**, sized appropriately. Micro Air has undergone extensive explosion testing to verify compliance. **Micro Air explosion vents are tested appropriate for Kst values up to 230 kst. For anything over 230 Kst, consult the factory.**
- (2) There must be **mechanical dampers** or an **isolation system** in any ductwork leading to a collector, thus eliminating the chance of a secondary explosion.
- (3) There must be an **isolation system** (chemical or fast-acting EIV valve) on any exhaust ductwork where clean air is being returned to the building.
- (4) Collectors shall be designed to prevent an accumulation of dust internally. All Micro Air collectors are now standard with the **ledgeless hopper** and **barrel lid kit equipped with hard pipe**.
- (5) NFPA 654 states that dust collectors *shall* be located outdoors. If that is not possible, collectors can be located indoors, but must be ducted to an exterior wall with a maximum of 3' of duct, or must utilize a **flameless vent (FlameQuench)** on the explosion vent panel.

④	38222-01	HOPPER – LEDGELESS	1 Consult Factory
④	38284-01	BARREL LID FOR LEDGELESS HOPPER WITH HARD PIPE CONNECTION	1 Consult Factory

**NOTES:**

- \* Explosion Vent panels can be installed on either left or right side of cabinet —Refer to drawings at right.
- \* If other components such as Mechanical Backdraft Dampers, Chemical Isolation, or Fast-Acting EIV Valves are required for OSHA/NFPA compliance in a retrofit application, refer to table on pages 6-7 for part #'s and prices.
- \* Compliance kits listed are tested appropriate for Kst values through 230 Kst. For any application capturing contaminants with Kst values higher than 230 Kst, consult Micro Air sales staff.

### Kst Theoretical Values - Common Materials

When looking to protect your equipment against a dust explosion, it is critical that you know the Kst value of your material. Kst, is the dust deflagration index, and it measures the relative explosion severity compared to other dusts. This is a relative index, however, and **any material with a Kst value greater than zero is considered to be at risk of an explosion.**

### Examples of Kst Values for Different Types of Dusts <sup>2</sup>

Dust explosion class*	Kst (bar.m/s)*	Characteristic*	Typical material**
St 0	0	No explosion	Silica
St 1	>0 and ≤ 200	Weak explosion	Powdered milk, charcoal, sulfur, sugar and zinc
St 2	>200 and ≤ 300	Strong explosion	Cellulose, wood flour, and poly methyl acrylate
St 3	>300	Very strong explosion	Anthraquinone, aluminum, and magnesium

The actual class is sample specific and will depend on varying characteristics of the material such as particle size or moisture.

\* OSHA CPL 03-00-008 - Combustible Dust National Emphasis Program.  
 \*\* NFPA 68, Standard on Explosion Prevention by Deflagration Venting.

Additionally, you can search an [extensive database](#) of materials that provides Kst values. The values listed in these sources should be treated as theoretical values, as the explosiveness of dust is based on several other factors including particle size, moisture content, available oxygen, and dust concentration. Testing, with a lab such as [Fauske](#) or [FIKE](#) is the only way to know the Kst value of a specific grade of a material.

# OTHER OSHA/NFPA COMPLIANT SOLUTIONS

## HYDROMAX WET COLLECTORS

Micro Air's HYDROMAX line of wet collectors offers the most technologically innovative design available. Competitors may offer all stainless construction, TEFC wash-down motors and /or NFPA compliant packages as expensive add-on options, while MICRO AIR has built all of it into the standard product offering, making MICRO AIR

### HOW IT WORKS...

Combustible dust enters the HYDROMAX wet collector through ducting in the rear of the filter cabinet and is run through an aqueous bed of water and a series of internal baffles, utilizing engineered water streams to drop out and filter the combustible dust. Dust is contained in the bottom of the collector for safe removal at necessary intervals. Water levels are automatically controlled through the MICRO AIR engineered flow valve system that can be interlocked with the dust producing equipment to meet OSHA and NFPA Codes.

**HYDROMAX WC2500**

## HYDROMAX Models/Specs

### WC2500 Wet Collector

#### WC2500 STANDARD FEATURES

- 2500 CFM
- NFPA compliant automatic low-level shut-off and motor-run interlock capability std.
- Auto-fill valve controlled by static pressure
- NEMA 4-wire, pre-wired control panel with push-button start/stop
- Digital flow control and heads-up display
- All 304SS construction with black marine grade powder epoxy finish
- Standard aluminum mesh after-filter built -in
- 4" powered sump vent damper meets NFPA requirements
- 10" rear intake collar
- 95% Efficiencies

#### WC2500 OPTIONS

- 250 CFM sump fan for magnesium applications where venting of off-gassing by products is required
- 99.97% DOP HEPA After-filter

**COMING SOON...1200 CFM, 5000 CFM MODELS**
