HOW IT WORKS:

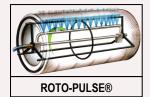

Contaminated air is pulled into the inlet plenum at the top of the FRP8-2 Cabinet, then travels down through the cartridge

into a specially designed stainless steel, rotating tube, engineered with pre-drilled holes. As the air

enters this tube, the force of the pulse causes the tube to rotate incrementally inside the cartridge. While rotating, air

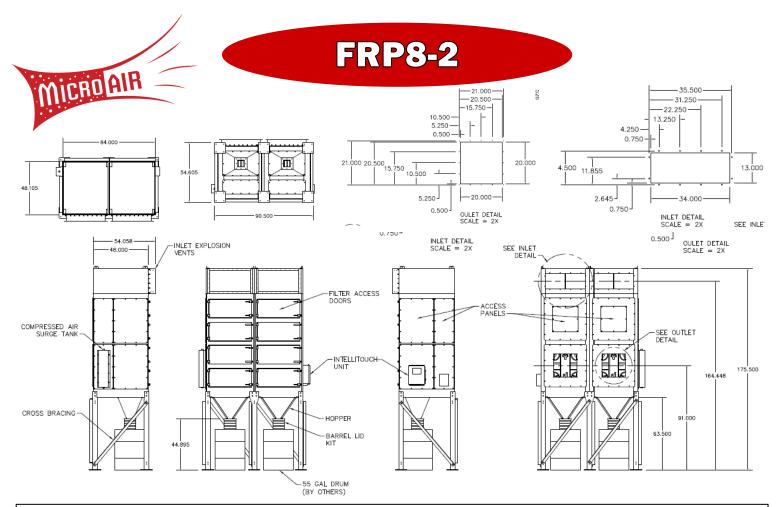

filter section, where the contaminant is filtered and dropped into the hopper or dust drawer. Breathe Easy, clean safe air is exhausted out the bottom of the unit. Cartridge cleaning is accomplished with Micro Air's proprietary Roto-Pulse[®] cleaning system, where air is pulsed

FRP8-2 with Intelli-Touch Energy Savings Controls and OSHA/NFPA Compliant Combustible Dust Package

exits the pre-drilled holes, resulting in air dispersement over the entire surface of the cartridge, providing for an improved cartridge cleaning cycle, compared to competitive backflush cleaning systems.
